

INB - "Justifying Equations"

$$(2x + 3) + 7 = 4x + 2$$

a) $2x + (3 + 7) = 4x + 2$

b) $2x + 10 = 4x + 2$

c) $\frac{-2x}{-2x} \quad \frac{-2x}{-2x}$

d) $\frac{0 + 10}{0 + 10} = 2x + 2$

e) $\frac{10}{10} = 2x + 2$

f) $\frac{-2}{-2} \quad \frac{-2}{-2}$

g) $8 = 2x + 0$

h) $\frac{8}{8} = \frac{2x}{2x}$

i) $\frac{2}{2} \quad \frac{2}{2}$

j) $4 = 1x$

k) $4 = x$

l) $x = 4$

a) associative prop.

b) CLT

c) Subtraction prop. of equality

d) additive inverse

e) additive identity

f) Subtraction prop. of equal

g) additive inverse

h) additive identity

i) division prop of equality

j) multiplicative inverse

k) multiplicative identity

l) Symmetric

$$5x + 3(x + 3) > 4x$$

a) $2x + 3x + 9 > 4x$

a) _____

b) $5x + 9 > 4x$

b) _____

c) $\underline{-5x} \quad \underline{-5x}$

c) _____

d) $0 + 9 > -1x$

d) _____

e) $9 > -1x$

e) _____

f) $\underline{\div -1} \quad \underline{\div -1}$

f) _____

g) $-1 < x$

g) _____

h) $x > -1$

h) _____
